Investment Objective

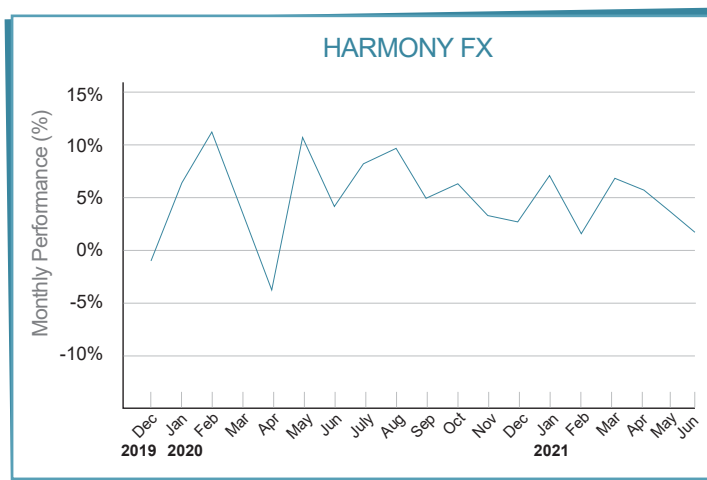

The Strategy aims to provide Investors with capital growth return on their investment by investing in foreign exchange and CFD trading.

Performance Aim

Harmony FX is a system that uses the principles of mean reversion - automated trading system. Mean reversion basically means that price would revert to its average. But for greater efficiency, the strategy does not trade for all 24 hours, but only during the Asian session, when the market is calm, with this approach, the results are much better. Please refer to our [Risk Disclosure Statement](#).

Performance Disclosure

Unless otherwise stated all data is as the date of factsheet. Past performance is not a guide to future performance. The value of investments can fall. Investors may not get back the amount invested. Income from investments may vary and is not guaranteed.

Investors should carefully consider the strategy's investment goals, risks, charges and expenses before investing. To obtain more details of the Strategy itself which contains information regarding the trading and associated charges and/or any other related information please contact us. You should carefully read the Company's legal documentation, including the [Order Execution Policy](#) and the [Risk Disclosure Statement](#) before you invest or subscribe to the Strategy.

What are the Risks?

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance of the product at a very high level.

All investments involve risks, including possible loss of principal. The Strategy's assets are based on Contract for Differences (CFDs) Financial Instruments and therefore involve potential for significant gain or loss due to leverage. CFDs are OTC products and cannot be sold on any exchange, MTFs or other trading venue. CFDs involve special risks, including currency fluctuations and economic and political uncertainties. Changes in market, political and economic conditions will affect the performance of the Strategy. Market conditions may mean that your CFD trade is closed at a less favourable price, which could significantly impact how much you get back. CFDs may be affected by slippage or the inability to end the product at a desired price due to unavailability of such price in the market. There is no capital protection against market risk, credit risk or liquidity risk.

CFDs may fluctuate significantly in a short period of time. If the change in price is against the direction chosen by the investor, then the investor can experience significant losses over a short period of time up to a maximum of the amount held as margin in the investor's account. However, Retail investors will never owe to the Company any amount in excess of the available funds in the account in light of the contractual "Negative Balance Protection". This product does not include any protection from future market performance, so you could lose some or all of your investment.

Risk warning: Contracts for Difference ("CFDs") are complex instruments and come with a high risk of losing money rapidly due to leverage. 63.64% of retail investor accounts lose money when trading CFDs with this provider. You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money. Please consider our Risk Disclosure.

Before to use this product you should carefully read the [RISK DISCLOSURE STATEMENT](#).

Glossary

Trading System: The trading method used by the Strategy to trade. It can be manual, algorithmic or mixed

Trading Type: This indicates the CFDs instruments that the strategy invests in (i.e foreign exchange, metals, commodities, stocks, indices, cryptos)
